## Montana Board of Oil and Gas Conservation **Environmental Assessment**

**Operator:** XTO Energy, Inc. Well Name/Number: Thiel 11X-12 Location: NW NW Section 12 T22N R59E County: Richland, MT; Field (or Wildcat) Wildcat Air Quality (possible concerns) Long drilling time: No. 25-35 days drilling time. Unusually deep drilling (high horsepower rig): A triple derrick rig, estimated 900-1000 HP to drill a single lateral Bakken Formation Horizontal Lateral, 18,802'MD/10,151'TVD. Possible H2S gas production: Slight In/near Class I air quality area: No, not in a Class I air quality area. Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under rule 75-2-211. Mitigation: <u>X</u> Air quality permit (AQB review) X Gas plants/pipelines available for sour gas \_\_ Special equipment/procedures requirements Other: Comments: Existing pipeline for H2S gas and sweet gas in the area. **Water Quality** (possible concerns) Salt/oil based mud: Yes to intermediate casing string hole and horizontal lateral, oil based invert drilling fluids. Surface casing hole to be drilled with freshwater and freshwater mud. High water table: Yes high water table anticipated. Surface drainage leads to live water: Yes, closest live water is the Yellowstone River, about 3/4 of a mile to the west and north from this location. Water well contamination: None, surface hole will be drilled with freshwater and freshwater drilling fluids to 1,600', steel surface casing will be run and cemented to surface from 1600' to protect any ground and surface waters. Numerous water wells about ½ to 5/8 of a mile from this location. Depth of these domestic and stock water wells are from 30' and 1410'. Surface casing will be set well below the depth of these water wells. No concerns.

Porous/permeable soils: Yes, sandy soils.

Class I stream drainage: No, Class I stream drainage.

Mitigation:

Lined reserve pit

- X Adequate surface casing
- \_\_ Berms/dykes, re-routed drainage
- X Closed mud system
- \_X Off-site disposal of liquids (in approved facility)
- X Other: Offsite disposal of oil based cuttings and solids.

Comments: 1600' of surface casing is enough surface casing to cover Base Fox Hills Formation. Surface hole will be drilled with freshwater and freshwater drilling muds to 1600'. Steel surface casing will be run to 1600' and cemented to surface. Oilbased invert drilling fluids will be recycled. Drill cuttings will be disposed of offsite. After the well has been completed, completions fluids will go to a commercial Class II disposal. No concerns.

Soils/Vegetation/Land Use

(possible concerns)
Steam crossings: None, anticipated.
High erosion potential: No high erosion potential, small cut, 0.2' and small fill, up to 3.9', required.
Loss of soil productivity: None, location to be restored after drilling well, if well is nonproductive. If
productive unused portion of drillsite will be reclaimed.
Unusually large wellsite: Yes, well site is very large, 550'X300'.
Damage to improvements: Slight, surface use is irrigated cropland.
Conflict with existing land use/values: Slight.
Mitigation
Avoid improvements (topographic tolerance)
Exception location requested
X Stockpile topsoil
Stream Crossing Permit (other agency review)
$\underline{X}$ Reclaim unused part of wellsite if productive
Special construction methods to enhance reclamation
X Other: Requires DEQ General Permit for Storm Water Discharge Associated with Construction
Activity, under ARM 17.30.1102(28).
Comments: Access will be over existing county road, #122 and well access road. A new access road will
be built into this location off county road #122, about 0.7 miles. Oil based drilling fluids will be recycled.
Completion fluids will be hauled to a Class II commercial disposal. Drill cuttings will be buried in the
lined reserve pit. No concerns.
Health Hazards/Noise
(possible concerns)
Proximity to public facilities/residences: <u>Closest residences about 1/2 of a mile to the northwest, 5/8 of a</u>
mile to the west southwest and 1 mile to the northeast from this location.
Possibility of H2S: Slight
Size of rig/length of drilling time: <u>Triple derrick drilling rig, 25 to 35 days drilling time.</u>
Size of fighteright of drining time. There defrick drining fig, 25 to 55 days drining time.
Mitigation:
_X Proper BOP equipment
Topographic sound barriers
H2S contingency and/or evacuation plan
Special equipment/procedures requirements
Other:
Comments: Adequate surface casing cemented to surface with working BOP stack should
mitigate any problems.
intigute any problems.
Wildlife/recreation
(possible concerns)
Proximity to sensitive wildlife areas (DFWP identified): None identified.
Proximity to recreation sites: None identified.
Creation of new access to wildlife habitat: No
Conflict with game range/refuge management: No, no game range/refuge in the area.
Threatened or endangered Species: Threatened or endangered species identified by USFWS in Richland
County are the Pallid Sturgeon, Whooping Crane, Interior Lease Tern and Piping Plover.
Mitigation:
Avoidance (topographic tolerance/exception)
Other agency review (DFWP, federal agencies, DSL)
Screening/fencing of pits, drillsite
Other:

Comments: Private irrigated cultivated surface lands. No concerns.

Historical/Cultural/Paleontological
(possible concerns)
Proximity to known sites None identified.
Mitigation
avoidance (topographic tolerance, location exception)
other agency review (SHPO, DSL, federal agencies)
Other:
Comments: Private irrigated cultivated surface lands. No concerns.
Social/Economic
(possible concerns)
Substantial effect on tax base
Create demand for new governmental services
Population increase or relocation
Comments: <u>Horizontal Bakken Formation oil well in a 1280 acre spacing unit.</u> No concerns.
Remarks or Special Concerns for this site
Single lateral Bakken Formation development horizontal well 18,802'MD/10,151'TVD.
Summary: Evaluation of Impacts and Cumulative effects
No long term impacts expected. Some short term impacts will occur.
I conclude that the approval of the subject Notice of Intent to Drill (does/does not) constitute a major
action of state government significantly affecting the quality of the human environment, and (does/does
<b>not</b> ) require the preparation of an environmental impact statement.
